

## Work steps task "Pillars and arch"

1. Draw the layout of the task on the floor.
2. Set up profiles at the right and left ends of the task.
3. Mark the total height of the wall on one profile and transfer it to the other profile using a hose level.  
(Mark a Hose symbol on the profiles)
4. Mark the layer dimensions on the profiles.
5. Lay out the first layer as a runner on the floor, also through the window opening.
6. Wall the layers up to the top edge of the masonry arch, in this case build an abutment for the last two layers.
7. Build the arch sticks with a stich.
8. Install arch sticks in the masonry.
9. Draw the layering for the masonry arch on the arch sticks.
10. Wall in the masonry arch.
11. Cover the masonry arch with the last layers.
12. Cut out the joints in the masonry in the meantime.
13. Stripping the masonry arch.
